Muhammad Mamooji

FULL STACK DEVELOPER

📞 (519) 239-5285 | ✉ mamoojim@hotmail.com | 🏠 mamooji.ca | 🐙 mamooji | in mamooji

---

Objective   To obtain a full time developer position, where my theoretical studies and applied skills can be further developed.

Skills

Languages   Typescript, JavaScript, HTML, CSS, C, C++, C-SHARP, Java, SQL, ARM
Technologies   ReactJS, Redux, NodeJS, MongoDB, BootStrap, Express, ASP.NET, Tailwind CSS, Firebase

Experience

Quintessence Wealth   *Toronto, Ontario*
JR FULL STACK DEVELOPER   *August 2021 - Present*

- Developed new features **independently** with **React** in **Typescript** according to the requirements and specifications of the **JIRA**
- **Stream lined** client **On-Boarding process**, allowing clients to fill **confidential information** about their account data with **React Final From**, making the entire **data collection** process digital instead of over the phone
- **Refactored legacy** JSX components, into clean **type safe** components with **Typescript**, while utilizing **existing** components and **patterns** found within the code base
- **Extended Microsoft Graph API** to allow clients to **share Outlook calendars** within our own Calendar component library

Townline Muslim Center | Samosa Corner   *Cambridge, Ontario*
FULL STACK DEVELOPER   *Monthly Contracts*

- Developed and deployed clients website in accordance to the owners requirements
- Set up **analytical tracking** and key word research with **Google Analytics** and **Google Search Console**
- Create unique **SEO** oriented **Titles** and **Meta descriptions** for each page to increase page views and google search rankings
- **Increased** online user reach to **20k+ new users** and established an online presence

Projects

Task Manager API 🐙
NODEJS, SENDGRID, MONGODB, MONGOOSE, JSONWEBTOKEN, EXPRESS   *June 2021*

- **NodeJS** used to create the backend application, **Express** to ensure handling of API requests, **MongoDB** used as a **NoSQL** store
- **Authentication** and **Authorization** was implemented as a middle ware in conjunction with the **json-web-token** library
- **Sendgrid** email notifications used on account **creation** and **deletion**
- **Mongoose** schema was used to create both task and user **models**

Weather Search 🐙
NODEJS, HANDLEBARS, AXIOS, HTML, TAILWIND CSS, EXPRESS   *Jan 2021*

- Responsive **NodeJS** web application that enables users to search for a weather forecast for any given location they enter
- Routing and API endpoints were handled with **Express**, while **Handlebars** library allowed for **HTML templating**
- **NodeJS API** was responsible for calling the **MapBox** and **WeatheStack API** endpoints and to obtain location and forecast data
- **Axios** library was used to create and handle **HTTP requests**
- **Tailwind CSS** was used to **style** the entire application and make it **responsive**

Build a Burger 🐙
REACTJS, FIREBASE, REDUX, AXIOS   *June 2020*

- Responsive **web application** created with **React** to intuitively build and order a custom burger
- Integrated with **Firebase** real time database and **Axios** library for **CRUD** operations to regarding Firebase API calls
- **Authentication** and **Authorization** handled with **Firebase**
- **Redux** for easy and centralized **state management** regarding user data

Education

Conestoga College   *Waterloo, Ontario*
SOFTWARE ENGINEERING TECHNOLOGY   *Sept. 2017 - April 2021*
